

BACHELOR'S DEGREE STUDIES

| | |
|----------------|-------------------------------|
| Study program: | Risk Management |
| Form of study: | Full-time (3 years) |
| ECTS credits: | 180 |
| Tuition fee: | 60,000 CZK = 2,465 EUR |

The Risk Management study program provides a theoretical and methodological foundation for carrying out all phases of the risk management process. It emphasizes the identification, analysis, evaluation, and treatment of risks, including assessing the financial demands of preventive measures. Students acquire the skills needed to manage risks in public administration as well as in operational safety. Graduates possess expert knowledge in risk assessment and treatment, including understanding the economic aspects of managing risks. They also have extensive knowledge in safety management, civil protection, and crisis management.

Additionally, they are proficient in using geographic information systems, specialized software tools, and applied statistical methods. They can assess territorial risks as well as risks related to workplace safety and operational management. Graduates are prepared for lower and middle management positions in risk management and safety processes. They find employment in private organizations and public administration, particularly in government offices, local authorities, and components of the integrated rescue system.

LIST OF COURSES

| | |
|--|--|
| Year 1/WINTER Mathematical Analysis Informatics Microeconomics Management Security Policy and State Security System Public Administration and Law Introduction to Academic Writing | Year 1/SUMMER Macroeconomics Business Economics Risk Management I Internal Security Fundamentals of Linear Algebra and Optimization Technical Chemistry |
